

## Leased-Line (Ethernet over Fibre)

### What is a Leased-Line?

Leased-Line connectivity offers fixed, guaranteed bandwidth over fibre at any given location based on individual customer requirements. This makes leased-lines ideal for organisations that require uncontended, dedicated bandwidth. Leased-Line bandwidth can also be increased quickly and easily in 10Mb to 1GB increments at any time over the course of the contract term to ensure your connectivity scales are precisely in-line with your business needs.

### What Leased-Line Packages are available ?

SoConnect offer Leased-Line contracts over 12 months or 3 years. A **Wires-Only** option is available which simply provides the connectivity. Alternatively, we can provide a **Managed Service** that includes a managed router. Routers offered depend on bandwidth required. Please contact us for further information.

### Benefits of SoConnect Leased-Lines:

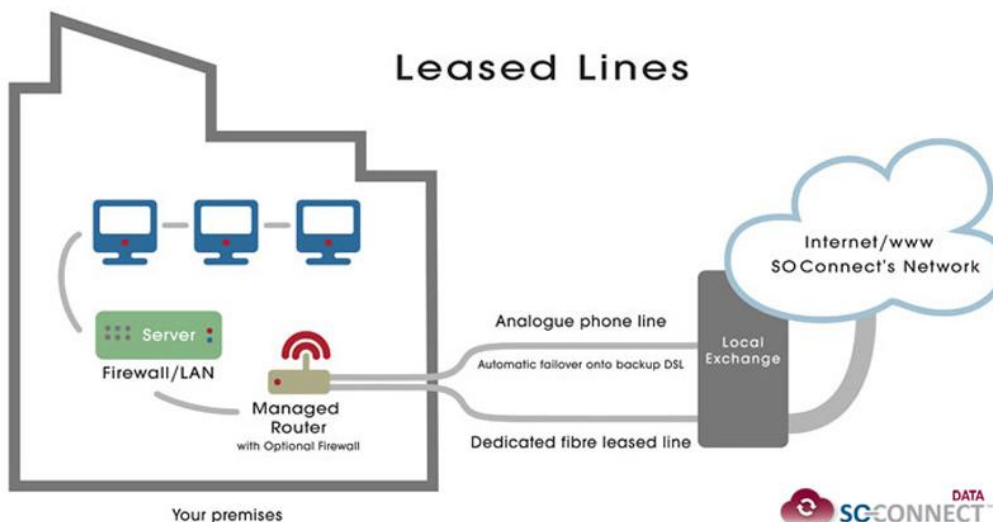

- ✓ Dedicated symmetrical bandwidth
- ✓ Uncontended 1:1 service
- ✓ 99.99% uptime
- ✓ 4 Hour SLA

### How Ethernet over Fibre works:

Fibre optic connectivity is the most advanced medium invented for data transfer with data being carried between fixed points literally at light speed.

Leased-Lines operate by providing a fixed, symmetrical data connectivity service over a fibre-optic connection. The UK's fibre network is constantly growing and fibre services can now be provisioned in most locations.

Delivery times range from 35-65 working days subject to site survey.

### How reliable is Ethernet over Fibre ?

Leased-Line connectivity is extremely resilient. SoConnect's SLA for any Ethernet over Fibre product is a guaranteed fix within 4 hours. We also have a network of engineers nation wide who can be routed to site within 2-3 hours if required.

### Ethernet over Fibre is best for...

- ✓ Organisations requiring fast, robust internet access
- ✓ Organisations requiring reliable, uncontended internet access for multiple sites and users
- ✓ Businesses needing the ability to re-grade their bandwidth during lean and busy times
- ✓ Companies that need consistent, uninterrupted internet access with SLA's
